U.S. Department of Agriculture
Agricultural Marketing Service
Fruit and Vegetable Division

Washington and Idaho
State Departments of Agriculture

F O R E W O R D

This summary is published in cooperation with the Washington State Department of Agriculture and Washington State University.

We wish to express our appreciation to the growers, shippers, buyers and other members of the industry, the Federal-State Inspection Service, the U. S. D. A. Crop Reporting Service and the National Weather Service for their cooperation in providing much of the information carried on the daily reports and in this summary.

Additional copies of this summary may be obtained by request from the Federal-State Market News Service, 2015 South First Street, Yakima, Washington 98903.

Shelby H. Sevier, Jr.

Local Representative

Yakima, Washington

DEFINITION OF TERMS

USDA - SRS Crop Reporting Service

TOTAL PRODUCTION - is the quantity actually harvested plus quantities which would have been acceptable for fresh market or processing but were not harvested because of economic reasons.

UTILIZED PRODUCTION - is the amount sold plus the quantities used at home or held in storage.

ECONOMIC ABANDONMENT - is the difference between total and utilized production which is mature fruit not harvested for economic reasons or excess cullage fruit.

UTILIZATION - refers to first utilization, not necessarily final utilization. For example, frozen fruit included some fruit that may be later used for making preserves. Grade-outs for fresh market fruit which are processed are included in the processing quantity. Fruits graded-out from canning or freezing and utilized for juice is included with juice.

PRICES - is a season average for all methods of sale. For a crop sold for both fresh market and processing, the season average price is a weighted average of the fresh and processing price.

Prices for fresh fruit, except as noted below, are the average prices producers receive at the point of first sale. This is commonly referred to as the average price as sold. Since the point of first sale is not the same for all producers, prices for the various methods of sale are weighted by the proportionate quantity sold. For example, if in a given state part of the fruit is sold f.o.b. packed by growers, part is sold as bulk fruit at the packinghouse door, and some is sold retail at roadside stands, the fresh fruit average price as sold is a weighted average of the average price for each method of sale.

Prices for fruit sold for processing are equivalent returns for fruit delivered to the processing plant door.

Exceptions to the above price definitions are:

(1) Fresh fruit sales in Washington and Oregon are equivalent returns at packinghouse door. The equivalent packinghouse returns represent adjusted prices. F.o.b. packed prices are adjusted down to an equivalent incoming packinghouse door price by subtracting all costs that accumulate between the incoming packinghouse door and the f.o.b. price. These costs include grading, packing, inspecting fees, selling, and other costs.

(2) Fresh prices shown for California represent returns at the first delivery point by the producer. The first delivery point price is defined as the price received by growers for fruit delivered at the local market, packinghouse, receiving shed, or any other first delivery point.

Value estimates in this report cover the marketing season or crop year or years and should not be confused with cash receipts from these crops for a single calendar year. The season average price for each state is applied to utilized production to compute value of production. The average price shown for the United States is obtained by dividing the U.S. value of production by the quantity utilized.

Note: Season as used in this summary applies to the complete report of the year's production, i.e.: shipments, unloads and sales start at harvest time and continue until completed the following year.

MARKETING NORTHWESTERN APPLES 1974 CROP

GENERAL COMMENTS

SHIPMENTS: Total shipments of fresh apples for the State of Washington amounted to 31,544 carlot and carlot equivalents and of this total, truck movement accounted for 27,765 while 3,672 moved by rail. Shipments in September and October were 3,432, substantially higher than at this time last season; however, the 3,233 figure reported in December was 333 cars and equivalents below December, 1973. January experienced it's normal decline but from February through May movement was excellent. Adverse weather conditions which delayed fruit development in those areas of the country normally competitive with Washington's apples were largely responsible for the state's heavier than average shipments.

PRODUCTION: Utilized production of the 1974 commercial apple crop (42-pound equivalents) in the United States was 154,383,000 compared to 148,218,000 in 1973 and for the State of Washington 43,000,000 compared to the 1973 crop of 44,286,000; all figures according to the Crop Reporting Board, S.R.S., U.S. Department of Agriculture.

WEATHER AND GROWING CONDITIONS: Yakima - Sub-zero temperatures were registered during the first nine days of January with a reading of 15 degrees below zero reported on the 9th of the month. Record lows were set on January 4th, 5th and 7th with some heating necessary in a few stone fruit orchards. In contrast to these earlier temperatures, record highs were experienced on the 15th, 27th and 29th of the month. The warm trend continued through February, March and April with above-normal temperatures being reported along with above-average precipitation. Record rains occurred during April and a 24-hour record was set on the 23-24th of the month. The trend was reversed during May and temperatures averaged several degrees cooler than normal.

By the end of the month most orchards in the lower valley were in full bloom or past bloom stages while the north valley was generally 7-10 days away from full bloom. Records indicated that there were 16 nights classified as cold but only 6 nights requiring heating and then only in the late night or early morning hours. Firing was necessary on only 1 night in March but 7 nights in May. The annual fruit frost season began the evening of March 15th and ended on the evening of May 23rd.

Wenatchee - The winter was not unusually cold and moisture was fully adequate. The coldest minimum was a minus 5 degrees recorded at the Tree Fruit Research Center on January 9th.

Cool weather during April slowed bud development considerably and subsequent cold nighttime temperatures in May caused some damage, particularly on the morning of May 16th when buds were at a tender stage. There were a total of 35 cold nights in April and May with the coldest minimums of 23 and 25 degrees reported on April 3rd and 13th respectively.

Frost warning service was begun on April 1st and lasted until May 31st. There were 9 nights when firing was necessary, 2 in April and 7 in May. Pollinating weather was variable and generally less favorable than normal because of unusually windy and cool conditions during May. Hail on May 18th struck the East Wenatchee area southward, causing severe damage in some orchards. At this point in the season some reduction in soft fruits over the previous year was predicted; however, the estimated apple production remained unchanged. Full bloom dates at the Tree Fruit Research Center for apples was May 1st.

continued next page

HARVESTING: The general release date was established as September 16th, 6 days later than last year. Harvest conditions were generally good although fruit size initially ran smaller than normal. The harvest was fairly well completed by the third week in October.

MARKETING: F.O.B. prices for tray pack cartons 125s and 100-113s Washington Extra Fancy were as follows:

Regular Storage: Red Delicious 125s opened at \$7.00-8.00 and by the first of October had fallen to \$7.00. The market underwent further declines and reached it's low of the season, \$6.00, by mid-November. The market reversed itself at this point and continued an upward move extending through the end of the year, with final prices of \$7.50-7.75 reached on March 29th. 100-113s opened at \$7.50-8.00 but by mid-November had declined as much as a full \$1.00. The market from that point on began to strengthen, finishing the season at \$8.00-8.50, while 80-113s were a strong \$8.50. Golden Delicious 125s opened at \$7.00-8.00. The market followed a very weak course through February 1st, however, reversed itself shortly thereafter and continued an upward move throughout the remainder of the season. 100-113s opened at \$7.50-8.00, but a down-side shift in price followed immediately, lasting through the third week in December. At this point the size structure changed to 64-113s but exerted no positive influence on price. By mid-February the market changed course and at the close of the season had reached a solid \$8.00-8.50 level.

Controlled Atmosphere Storage: Red Delicious 125s opened the season at \$8.00 and maintained a very strong price pattern throughout the season, closing for the year at \$13.50-14.50. 100-113s began the season

at \$8.50-9.25, moving steadily higher and finishing at a strong \$15.00. Golden Delicious 125s opened at \$7.00-7.50, moving higher as the season progressed, closing out the year at \$13.50-14.50. 72-113s opened at \$7.00-8.00 and maintained an upward trend through the season, final prices were \$13.50-14.50.

Auctions: The average prices on all five auctions during the season compared to the previous two years are as follows: Red Delicious \$11.01, \$7.61 and \$9.10; Standard Delicious \$8.87, \$6.99 and \$7.20; Golden Delicious \$9.89, \$7.82 and \$8.13; Winesaps \$9.64, \$8.47 and \$9.01.

PACKAGING: Tray pack cartons were the most commonly used containers with 64-125s the most frequently used size.

NOTE: Weather information is provided largely by the U.S. Department of Commerce Environmental Services Administration Weather Services, Yakima and Wenatchee districts.
